PRESS RELEASE

A new step forward for Rampini: partnership with SUNWIN announced

The collaboration expands Rampini's offering with the new iEV10 and iEV12 electric buses, available from the second half of 2027

Rimini, 24 November 2026 – At IBE - Intermobility and Bus Expo 2026, Rampini announces the launch of an industrial and commercial partnership with SUNWIN, a company specialising in bus design and manufacturing and wholly owned by SAIC Motor.

The agreement marks a new step in Rampini's growth strategy and is intended to expand the company's offering, providing an increasingly comprehensive response to the needs of public transport operators.

The collaboration brings together Rampini's market knowledge, technical expertise, customisation capabilities and close relationships with operators with SUNWIN's technology, corporate strength and industrial capacity.

Rampini has operated in the bus sector for more than twenty years, building specific expertise in electric mobility and in the design of zero-emission mini- and midi-buses. This experience as a manufacturer guided the selection of the partner and the assessment of its platforms, production processes and product reliability.

The selection of SUNWIN is the result of an in-depth technical and industrial assessment that considered the vehicles' features, the quality of the processes, the company's strength and its willingness to develop solutions tailored to the needs of the Italian and European markets.

SUNWIN operates a 134,000-square-metre manufacturing facility, with a stated average production capacity of 400 units per month, as well as dedicated vehicle research, development and testing facilities. As part of SAIC Motor, the company also operates within an international automotive group active in the design and manufacture of passenger and commercial vehicles.

> *"For us, this represents a step change, not a change of identity. We will continue to invest in our products and in the expertise we have developed over the years. We assessed this collaboration through the eyes and with the experience of a manufacturer, analysing the products, platforms and industrial organisation of our partner. Our partnership with SUNWIN will enable us to add new solutions to our range and further strengthen our role in the electric mobility market."*

The new iEV10 and iEV12

The first tangible result of the collaboration is the iEV10 and iEV12, two new 10.5- and 12-metre electric buses unveiled at IBE 2026.

The two models mark the launch of a programme that will progressively expand the Rampini range, with the aim of offering solutions suited to different operating environments and transport requirements.

The vehicles will be available from the second half of 2027.

Rampini will contribute its technical and commercial expertise, its knowledge of operators' requirements and its ability to configure and customise vehicles. These capabilities will be combined with SUNWIN's technology platforms, production organisation and industrial capacity.

The first phase of the collaboration will focus on the Italian market. The project may subsequently be extended to other European countries based on both parties' further common strategic understanding.

> *"Our presence at IBE alongside Rampini demonstrates our direct involvement and our determination to build a significant and lasting project. The vehicles presented today are the first result of our work together and the starting point of a path that we intend to develop over time."*
> **Zhengang MA, General Manager of SUNWIN**

The joint presence of the two companies at IBE highlights the industrial nature of the collaboration and their shared commitment to developing an offering that is competitive, reliable and aligned with the needs of zero-emission mobility.

The iEV10 and iEV12 will be on display from 24 to 26 November at the Rampini stand, Hall C1 - Stand 101, at Rimini Expo Centre.

Rampini

Founded in 1945, Rampini is an Italian company specialising in the design and manufacture of vehicles. For more than twenty years, it has operated in the zero-emission bus sector, developing specific expertise in zero-emission mobility and solutions for urban public transport.

The company designs and manufactures mini- and midi-sized battery-electric and hydrogen buses, combining production with vehicle customisation, after-sales service and operator support.
