

SHELTERS

SHELTERS

Design and manufacturing of shelters and containers up to ISO 20-foot standard, with the possibility of expandable configurations. Structures can be manufactured in steel or using sandwich panel technology, depending on the required operational performance. Suitable for logistic applications, command and control systems, and transport of equipment and specialized systems. Shelters can be equipped with air-conditioning systems, cooling systems, integrated generator sets, telescopic MASTS, and CBRN protection systems. They are fitted with ISO corner castings for transport and vehicle securing, and can integrate leveling and hook-lift loading/unloading systems. Structures can be CSC certified and air-transportable, using symmetrical or asymmetrical longerons. Motorized access doors and hatches can be provided on request. The internal layout is fully customizable, allowing different equipment configurations.

Dimensions	ISO 20; ISO 10; Customized non ISO dimensions
Shielding Effectiveness	60 dB(m) 10 [kHz] – 10 [GHz] (rif. IEEE-STD-299) 40 dB(m) 10 [GHz] – 18 [GHz] (rif. IEEE-STD-299)
Transportability	On road/ off road Aircraft loading Train Trailer
Inner Layout	On customer requirements
HVAC	On request/customer requirements
Cooling System for Rack	On request/customer requirements
Painting	NATO standard (camouflage on request)
Standard	MIL-STD 810 MIL-STD 1472 IEE-STD-299 ASTM 1925 ISO 668
